

Luke Howsam

Senior Software Engineer

luke.howsam54@gmail.com | linkedin.com/in/lukehowsam | github.com/luke-h1 | lhowsam.com

Senior engineer with 5+ years in software delivery and 3+ years building production React Native and React applications at scale. Strong in cross-platform architecture, performance, testing, and DevOps. AI-native workflow using Cursor, Claude Code, and Codex daily. Background in QA gives a rigorous approach to quality. Active open-source contributor on personal and community React Native projects.

Selected highlights

- Collaborated on a greenfield React Native/Expo app replacing legacy native apps for a high-traffic sports product • Shared React Native + web SDK used across internal teams
- Reduced CI build-time reduction from 10 min to ~3 min; automated test runs cut from 50 min to ~20 min
- Open-source work on React Native apps/libraries focused on performance and premium UI look & feel

Technical skills

React Native: Expo, Expo Router, Reanimated, Gesture Handler, FlashList, New Architecture, EAS, Maestro

JavaScript/TypeScript: React, Next.js, Node.js, GraphQL, Redux, Legend State

AI tooling: Cursor, Claude Code, Codex, AI SDKs

Quality: Jest, React Testing Library, Playwright, Detox, Maestro

Platform & DevOps: AWS, Azure, Terraform, Kubernetes, GitHub Actions, Sentry, Cloudflare

Learning: Swift, Swift UI

Open source & side projects

- **foam** - production-grade Expo/React Native app for Twitch (High volume chat, live streams, WebView performance, native tabs)

Experience

Software Developer - Flutter UKI / Sporting Life + TimeForm (Jan 2025 - Present)

Consumer sports media apps serving millions of users monthly.

- Lead greenfield React Native/Expo development, migrating a Kotlin + Swift codebase to a shared cross-platform stack with improved UX, animations, and data visualisation
- Collaborated with Software Mansion during the early delivery phase of the React Native programme
- Architect and maintain a shared SDK toolkit for React Native and web consumed across internal product teams
- Ship frontend/backend features, code reviews, and test coverage across unit, integration, and E2E suites
- Improve CI/CD pipelines and cloud infrastructure on AWS/Azure (Terraform, reliability, build speed)

Software Developer - Flutter UKI / Sky Betting & Gaming (Aug 2023 - Nov 2024)

Gaming experience tribe; mission-critical services for millions of monthly customers.

- Built and maintained internal NPM packages, Next.js apps, and AWS serverless microservices in large monorepos
- Supported a business-critical backend lambda used across the organisation
- Led service migrations/refactors and infrastructure-as-code improvements on AWS (Lambda, ECS)• Used feature flags and A/B testing to de-risk production releases; mentored teammates and acted as squad captain
- Monitored production health with New Relic, Grafana, and Prometheus

Software Engineer - Hive IT (May 2022 - Aug 2023)

Digital agency delivery across public and private sector clients.

- Migrated a legacy monorepo to modern tooling, cutting CI build times from ~10 minutes to ~3 minutes
- Delivered React/Next.js/Sanity features end-to-end with clients, POs, and delivery teams
- Presented technical proofs of concept to stakeholders; mentored junior engineers

Software Tester to Junior Software Tester - Hive IT (Oct 2020 - May 2022)

Built automated testing practice and culture before moving into engineering.

- Reduced automated CI test runtime from ~50 minutes to ~20 minutes
- Designed test plans, maintained large automated suites, and coached junior testers
