Luke Howsam

Software Engineer

luke.howsam54@gmail.com | linkedin.com/in/lukehowsam | github.com/luke-h1 | lhowsam.com

Engineer with 5+ years in software delivery and 3+ years building scalable web, mobile and backend services. Strong in CI/CD, backend services, cloud infrastructure, performance & testing. Background in QA gives a rigorous approach to quality. Active open-source contributor on personal and community projects.

Selected highlights

- Supported mission critical backend, cloud and frontend services responsible for serving millions of monthly users
- Collaborated on greenfield React Native/Expo projects replacing legacy native apps for a high traffic sports product
- Built SDKs and maintained backend services for mission critical services

Technical skills

Platform & DevOps: AWS, Azure, containerisation, Serverless architecture, GitHub Actions, Cloudflare, Terraform/IAC

Observability: Sentry, New Relic, Grafana, Prometheus, Cloudwatch

JavaScript/TypeScript: React, Next.js, Astro, Node.js (express, other frameworks etc.), GraphQL, Redux, Legend State

React Native: Expo, Expo Router, Reanimated, Gesture Handler, FlashList, New Architecture, EAS, Maestro

AI tooling: Cursor, Claude Code, Codex, AI SDKs

Quality: Jest, React Testing Library, Playwright, Selenium, Detox, Maestro

Learning: Swift + Swift UI, Golang

Open source / side projects

• **foam** - Expo/React Native app for Twitch (https://github.com/luke-h1/foam)

• **foam-proxy** - Authentication / backend service for foam - Go, AWS lambda, Cloudflare, Terraform (https://github.com/luke-h1/foam-proxy)

• **Tightlog** - Fishing app built for fishermen (entered into Revenuecat shipathon 2026) - Expo/react native, AI, cloudflare workers, SQLite, OneSignal, Resend, Revenuecat (https://tightlog.com)

Experience

Software Developer - Flutter UKI / Sporting Life + TimeForm *(Jan 2025 - Aug 2026).* *Consumer sports media apps serving millions of users monthly.*

- Lead greenfield React Native/Expo development, migrating a Kotlin + Swift codebase to a shared cross-platform stack with improved UX, animations, and data visualisation
- Collaborated with Software Mansion during the early delivery phase of the React Native programme
- Architect and maintain a shared SDK toolkit for React Native and web consumed across internal product teams
- Ship frontend/backend features, code reviews, and test coverage across unit, integration, and E2E suites
- Improve CI/CD pipelines and cloud infrastructure on AWS/Azure (Terraform, reliability, build speed)

Software Developer - Flutter UKI / Sky Betting & Gaming ***(Aug 2023 - Nov 2024)***

Gaming experience tribe; mission-critical services for millions of monthly customers.

- Built and maintained internal NPM packages, Next.js apps, and AWS microservices in large monorepos responsible for serving (~5-6 million monthly users).
- Supported a business-critical backend lambda used across the organisation
- Led service migrations/refactors and infrastructure-as-code improvements on AWS (Lambda, ECS)
- Used feature flags and A/B testing to de-risk production releases; mentored teammates and participated in support rotas.
- Monitored production health with New Relic, Grafana, and Prometheus

Software Engineer - Hive IT ***(May 2022 - Aug 2023)***

Digital agency delivery across public and private sector clients.

- Migrated a legacy monorepo to modern tooling, cutting CI build times from ~10 minutes to ~3 minutes
- Delivered React/Next.js/Sanity features end-to-end with clients, POs, and delivery teams
- Presented technical proofs of concept to stakeholders; mentored junior engineers
- Involved in backend architecture discussions (database design, performance bottlenecks, migrations etc.)

Software Tester to Junior Software Tester - Hive IT ***(Oct 2020 - May 2022)***

Built automated testing practice and culture before moving into engineering.

- Reduced automated CI test runtime from ~50 minutes to ~20 minutes
- Designed test plans, maintained large automated suites, and coached junior testers
